                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to sixty one nucleic acids encoding PRO polypeptides (secreted and transmembrane). The polynucleotide is useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. The polynucleotide may also be used in preparing PRO polypeptides by recombinant techniques, and in generating either transgenic animals or knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The PRO polypeptide or the antibody is used in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as mucosal lesions e.g. ulcers and enterocolitis, skin disease e.g. psoriasis, cancer e.g. lung cancer and colon cancer, nerve cell disease e.g. Alzheimer's disease and Parkinson's disease, Usher syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sixty one isolated nucleic acids encoding a PRO polypeptide, e.g. PRO245 or PRO1868, useful in chromosome and gene mapping, in generating antisense RNA and DNA, and in treating cancer and Alzheimer's disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Botstein D, Desnoyers L, Eaton DL, Ferrara N; Fong S, Gao W, Gerber H, Gerritsen ME, Goddard A; Grimaldi JC, Gurney AL, Hillan KJ, Kljavin IJ; an J, Paoni NF, Roy MA, Stewart TA, Tumas D;

New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification

Claim 11; Fig 20; 706pp; English.

The invention discloses human nucleic acids encoding secreted and transmembrane (PRO) polypeptides. Also disclosed is an antibody that specifically binds to the PRO polypeptide, a method for stimulating the release of tumour necrosis factor alpha (TNF-alpha) from human blood by contacting the blood a PRO polypeptide, a method for stimulating the

politication of university and the control of the presence of a tumour in a mammal and an oligonucleotide probe derived from any of the PRO nucleotide sequences are useful as probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant techniques and in gene therapy (e.g. for replacement of defective gene). The PRO polypeptides are useful as molecular weight markers for protein electrophoresis purposes, for chromosome identification, as chromosome markers, as therapeutic agents, for stimulating the proliferation or differentiation of chondrocytes and detecting the presence of a tumour. The PRO polypeptides and nucleic acids may also be used diagnostically for tissue typing. The sequences presented in ABU67406-ABU67710 are the PRO polypeptides of the invention. 112 120 180 232 240 292 300 352 CODLYAWIDGSISQFRNWYVDEPSCGSEVCVVMYHQPSAPAGIGGPYMPQWNDDRCNMKN 172 ADLAETRPDLKNISFRVCSGEATPDDMSCDYDNMAVNPSESGFVTLVSVESGFVTNDIYE 360 25 9 RLNFEEAKEACRRDGGQLVSIESEDEQKLIEKFIENLLPSDGDFWIGLRRREEKQSNSTA 61 RLNFEEAKBACRRDGGQLVSIESEDEQKLIEKFIENLLPSDGDFWIGLRRREEKQSNSTA NFICKYSDEKPAVPSREAEGEETELTTPVLPEETQEEDAKKTFKESREAALNLAYILIPS 241 IPLILLLVYTTVVCWVWICRKRKREQPDPSTKKQHTIWPSPHQGNSPDLEVYNVIRKQSE ADLAETRPDLKNISPRVCSGEATPDDMSCDYDNMAVNPSESGFVTLVSVESGFVTNDIYE 1 MRPGTALQAVLLAVLLVGLRAATGRLLS------GQPVCRGGTQRPCYKVIYFHDTSR IPLLLLLLVVTTVVCWVWICRKRKREQPDPSTKKQHTIWPSPHQGNSPDLEVYNVIRKQSE Gaps ., Query Match 99.3%; Score 1986; DB 24; Length 382; Best Local Similarity 97.9%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A Geneseq 19Jun03:*

                                                                                                                                                         present sequence represents a human lectin ss3939 polypeptide. The
                                                                                                                                                                   polynucleotide sequence is a source of probes, which may be used to identify nucleic acids encoding esp393 protefeins, to identify human chromosome number 11, to map genes on human chromosome number 11, to sidentify diseases associated with chromosome 11, as single-stranded sense or antisense oligonucleotides to inhibit expression of polypeptides encoded by the ss3939 gene, and for gene therapy. The ss3939 polypeptides may be useful for developing treatments for amounts of the polypeptides. The antibodies may be useful for developing treatments for detecting the presence of ss3939 polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                              1 GRLLSGQPVCRGGTQRPCYKVIYFHDTSRRLNFEEAKEACRRDGGQLVSIESEDEQKLIE

The present sequence is a human extracellular matrix and cell adhesion molecule (XMAD). The XMAD is used for screening a compound for adhesion molecule (XMAD). The XMAD is used for screening a compound for effectiveness as an agonist or antagonist of XMAD. The identified agonist or antagoinst are used for treating a disease or condition associated with decreased or increased expression of functional XMAD. The polymuclectides encoding XMAD are useful in somatic or germline gene to therapy to correct a genetic deficiency, to express a conditionally lethal gene product and to express a protein which affords protection against intracellular parasites and also for diagnosi. of disorders associated with expression of XMAD. The maturally occurring genemic sequences and to create knock in humanised animals (pigs) or transgenic hybridisation probes useful in mapping the naturally occurring genomic sequences and to create knock in humanised animals (pigs) or transgenic continuals (mice or rats) to model human diseases. Oligonuclectide or longer fragments derived from the polymuclectide sequences may be used as elements on a microarray. Antibodies which specifically bind XMAD may be used for the disposses of disorders such as secondars such as acquired immune deficiency cused for the disposses of disorders such as acquired immune deficiency disorders such as acquired immune deficiency syndrome, to bornaria, asthma, asthma, athmas, multiple solerosis, Grave's disease, observative colling, atterioss atherosals, rheumatoid arthritis, ulcerative colling, atterioss atherosals, parasitic, protecal and helminthic infections and cancer including breast, bone matrow, main and natures and cancer including accordance includes actinic main and and anteriors and and cancer including because and cancer including and accordance including and accordance

The polynucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepais, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis. The sequences are involved in chemotactic or chemokinetic activity, regulation of haematopoiesis, treatment of myeloid or lymphoid

ö
          regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, tissue repair, healing of burns, incisions, ulcers, treatment of steoproration of bone, cartilage, tendon, ligament and/or nerve tissue esteoproratis, bealing of burns, incisions, ulcers, treatment of disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis and myasthenia and coagulation disorders. Sequences ABG66666-ABG66758 represent human novel polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                   120

                                                   The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune chamboly autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple solerosis, theumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as mycoardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KFIENLLPSDGDFWIGLRRREEKQSNSTACQDLYAWTDGSISQFRNWYVDEPSCGSEVCV 120

AAM199166 to AAH99904 encode the human proteins given in AAW25225 to
AAW25963. The proteins can have activities based on the tissues and
cells they are expressed in, such as: antinflammatory; antinheumatic;
antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant;
cardiavascular; antianaemic; antiagregant; hamenostatic; vulnerary;
cardiavascular; antianaemic; antiagregant; hamenostatic; vulnerary;
antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic;
antidation; the proteins and polynucleotides are useful for screening for production; The proteins and polynucleotides are useful for screening for gonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, crheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, infections, autoimmunity, genetic disorcers, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, hammandeliciency, eczema, allergic osteoporosis, severe combined immunodeficiency, eczema, allergic rhinitis, asthma, disbetes, cancer, multiple sclerosis, depression, allergic contrological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           KFIENLLPSDGDFWIGLRRREEKQSNSTACQDLYAWTDGSISQFRWWYVDEPSCGSEVCV 156

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The polynuclectide sequences given in AAA26346 to AAA26458 encode the human secreted proteins given in AAY91451 to AAY91691. The human secreted proteins given in AAY91451 to AAY91691. The human secreted corpusing the carbon of the tissues and cells they are expressed in. Examples of the activities are: cytostatic; they are expressed in. Examples of the activities are: cytostatic; neuroprotective; antiallergic; osteopathic; antiarthritic; antibacterial; antidiabetic; antiasthma; antipsoriatic; and cardiant. The polynucleotides and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the proteins in a sample or by determining the presence of mutations in the polynucleotides. Specific uses are described for each of the polynucleotides, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and foetal deficiencies, blood disorders, developmental abnormalities and foetal deficiencies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           autoimmune diseases, heparic and renal disease, inflammation, allergies, Alzheimer's and behavioural disorders, schizophrenia, osteoporosis, arthritis, infections, AlbS, spinal cord injuries, transplant rejection, diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, reproductive disorders, gastrointestinal disorders and metabolic disorders. The proteins or polynucleotides can also be used as food additives or preservatives. The proteins are also useful for identifying their binding partners. AAA26337 to AAA26345 and AAY91450 are sequences used in the

                                                                                                        AAU29033
                                                                                     RESULT
                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAV13344-403 represent secreted and transmembrane human proteins.

The cDNA sequences are obtained from cDNA libraries, prepared from
fetal lung, fetal kidney, fetal brain, fetal liver and fetal retina.

The encoded polypeptides have specific uses based on their homology to
known polypeptides, e.g. PRO211 and PRO217 can be used for disorders
associated with the preservation and maintenance of gastrointestinal
mucosa and the repair of acute and chronic mucosal lesions
(e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal
mucosa and the repair of acute and chronic mucosal lesions
(e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal
mucosa and the repair of acute and chronic mucosal lesions
(c.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal
cancers such as lung squamous cell carcinoma of the vulva and gliomas),
concern effects on cell growth and development, diseases related to
growth or survival of nerve cells including Parkinson's disease,
potent effects on cell growth and development, diseases related to
growth or survival of nerve cells including Parkinson's disease,
for fibromodulin, e.g. for reducing dermal scarring. PRO256 can be used
as a target for anti-tumor drugs. PRO331 may be used in the treatment
of Usher Syndrome or Atrophia areata; PRO269 can be used as an
anti-thrombookic agent; PRO287 polypeptides and portions may have
therapeutic applications in wound healing and tissue repair; PRO317 can
be used for treating problems of the kidney, uterus, endometrium, blood
conti-treatment e.g. in the heart of genital tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   112

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                       Sequences AAU29024-AAU29128 represent PRO polypeptides of the invention.
The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of and a control sample of normal cells, whereby a higher level of mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TMF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of fondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also proteins can be used to cervical, or liver tumours, in mammalian character, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     112
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           172

The present sequence is one of sixty one novel secreted and transmembrane PRO polypeptides. The PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g. lung enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, therosclerosis), inflammatory disorders (e.g. asthma, rheumatorid arthritis, multiple sclerosis), infertility, AIDS and diabetes and retinal disorders such as extinitis pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization probes, and in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           53 BDEQKLIEKFIENLLPSDGDFWIGLRRREEKQSNSTACQDLYAWTDGSISQFRNWYVDEP

New PRO polypeptides and nucleic acid molecules, useful in diagnosing or treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, cancer, AIDS, Alzheimer's disease or Parkinson's disease.

Claim 12; Fig 50; 473pp; English.

The invention describes sixty one nucleic acids encoding PRO polypeptides (secreted and transmembrane). The PRO polypeptides and nucleic acids are useful in diagnosing or treating enterocolities, gastrointestinal ulceration, skin diseases associated with abnormal keratinocyte differentiation, e.g. psoriasis or epithelial cancers such as squamous cell carcinoma, Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, inflammatory diseases, e.g. rheumatoid arthritis, asthma or multiple sclerosis, organ failure, atherosclerosis, cancer, diabetic complications, or mutations in general. The polypeptides are also useful for wound repair and associated therapies concerned with re-growth of tissue. The PRO polypeptides and nucleic acid molecules are also useful in gene therapy, and as molecular weight markers for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the isolation of novel human secreted and transmembrane proteins (PRO polypeptides), and the polynucleotide sequences encoding them. The polynucleotide sequences are useful in molecular biology, as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. The polynucleotide sequences may also be used in preparing PRO polypeptides by recombinant techniques, and in generating either transgenic animals or knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or their antibodies are useful in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as cancer, Alzheimer's disease or ischaemia, and in various diagnostic assays.
                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO245 or PRO1868, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid with at least 80% nucleic acid sequence identity to a nucleotide sequence encoding one of 6 secreted/transmembrane polypeptides, or PRO polypeptides or encoding a CC FRO portein extracellular domain. Also included are a vector comprising the PRO protein extracellular domain. Also included are a vector comprising the PRO protein extracellular cacid, a host cell for the expression of the PRO polypeptide (by culturing the host cell for the expression of the PRO polypeptide (by culturing the host cell for the expression of the PRO polypeptide (having at least 80% sequence identity) or (c) an isolated PRO polypeptide (having at least 80% sequence identity) or (d) an amino acid sequence encoded by a nucleic acid molecule deposited with an ATCC number (detailed in the specification); or (c) an extracellular domain of a PRO polypeptide or to a PRO polypeptide lacking its associated signal peptide), a chimaeric molecule comprising a PRO containing the polypeptide, a chimaeric molecule comprising a PRO containing the polypeptide, initing a bioactive molecule to a cell expressing a PRO245 or PRO1868 and modulating at least one biological activity of a cell expressing a PRO245 or PRO1868. Nucleic acids which encode PRO can be used in the development and screening of the propose. The PRO polypeptide are useful as molecular markers for protein electrophoresis, and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides and concleic acids may also be used in tissue typing. Anti-PRO pulping and in diagnostic asisays for PRO, and in affinity purification of present sequence represents a PRO protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identification, as chromosome markers, in generating probes and in tissue typing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         , Botstein D, Desnoyers L, Eaton DL, Ferrara N;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            inflammatory disorder; acquired immune deficiency syndrome; AIDS; Addison's disease; allergy; anaemia; asthma; atherosclerosis; melanoma; Crohn's disease; diabetes mellitus; atopic dermatitis; lymphoma; cancer; glomerulonephritis; multiple sclerosis; Grave's disease; osteoarthritis; osteoporosis; psoriasis; rhematoid arthritis; ulcerative colitis; infection; cell proliferative disorder; actinic keratosis; myeloma; arteriosclerosis; nootropic; anticonvulsant; antithyroid; nephrotropic;
                                                                                                                                                 The present sequence represents a human lectin ss3939 polypeptide. The polymuclectide sequence is a source of probes, which may be used to identify nucleic acids encoding ss3939 protesins, to identify human chromosome number 11, to map genes on human chromosome number 11, to sense or antisense oligonucleotides to inhibit expression of polypeptides encoded by the ss3339 gene, and for gene therapy. The ss3939 polypeptides may be useful for developing treatments for diseases (none specified) associated with defective or insufficient amounts of the polypeptides. The antibodies may be useful for developing treatments for detecting the presence of ss3939 polypeptides.

The present sequence is a human extracellular matrix and cell
adhesion molecule (XMAD). The XMAD is used for screening a compound for
ceffectiveness as an agonist or antagonist of XMAD. The identified agonist
cor antagoinst are used for treating a functional XMAD. The
cor antagoinst are used for treating a functional XMAD. The
cor polynucleotides encoding XMAD are useful in somatic or germline gene
therapy to correct a genetic deficiency, to express a conditionally
clethal gene product and to express a protein which affords protection
against intracellular parasites and also for diagnosis of disorders
associated with expression of XMAD. They are also used for generating
chybridisation probes useful in mapping the naturally occurring genemic
sequences and to create knock in humanised animals (pigs) or transgenic
chybridisation probes useful in mapping the naturally occurring genemic
sequences and to create knock in humanised animals (pigs) or transgenic
chybridisation probes useful in mapping the naturally occurring senomic
sequences and to create knock in humanised animals (pigs) or transgenic
chybridisation probes useful in mapping the naturally bused as
confidents on a microarray. Antibodies which specifically bind XMAD may be
clements on a microarray. Antibodies which specifically bind XMAD. Diseases
considered to reate anoitor patients being treated with XMAD. Diseases
diagnosed, prevented or treated include genetic disorders such as
drenoleukodystrophy, Down's syndrome, cystic fibrosis, Gaucher's
disease, myconic dystrophy, sickle cell anaemia, thalassaemia,
catcolimmune/inflammatory disorders acuch as acquired immune deficiency
syndrome (AIDS), Addison's disease, diaberes mellitus, atopic demantitis,
controlled or preserved diagnosis controlled cysters and an antitis, of the selection of the syndrome deficiency
controlled cysters and controlled cysters and cysters and controlled cysters and cysters 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     glomerulonephritis, multiple sclerosis, Grave's disease, osteoarthritis, osteoporosis, psoriasis, rheumatoid arthritis, ulcerative colitis, bacterial, fungal, parasitic, protozoal and helminthic infections and cell proliferative disorders such as actinic keratosis, arteriosclerosis and cancer including breast, bladder, bone marrow, brain and uterus cancer, leukaemia, adenocarcinoma, lymphoma, melanoma and myeloma.

                                                                                                                                                       The invention relates to human novel polynucleotides and associated polypeptides. The polynucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis. The sequences are involved in chemotactic or chemokinetic activity, regulation of haematopoiesis, treatment of myeloid or lymphoid

cell disorders and platelet disorders such as thrombocytopenia, regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, tissue repair, healing of burns, incisions, ulcers, treatment of osteoporosis, osteoarthitis, bone degenerative disorders and periodontal disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis and myasthenia gravis, allergic conditions such as asthma, thrombolysis or thrombosis and cosquilation disorders. Sequences ABG66666-ABG66758 represent human novel polypeptides of the invention.

WO200153455-A2

```
The invention relates to novel genes (ABL89449-ABL50853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating cc medical conditions e.g. by protein or gene therapy. The genes are useful conditional caids, proteins, antibodies and (ant)sponists are useful.

C isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant)sponists are useful.

C in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast comparrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune to disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and control procession in the control of prassitic infectious diseases such as viral, bacterial, fungal control of the procession.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

AAM99166 to AAH99904 encode the human proteins given in AAW25225 to
AAW25963. The proteins can have activities based on the tissues and
cells they are expressed in, such as: antinflammatory; antinheumatic;
antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant;
cardiavascular; antianaemic; antiadgaregant; hungicide; antimutagen;
cardiavascular; antianaemic; antiadgaregant; hungicide; antiasthmatic;
antidiabetic; cytostatic; neuroprotective; antidapressant; nootropic;
antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic;
antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic;
antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic;
controparthnoonian; and immunostimulant. The proteins and polymucleotides
encoding them can be used in gene therapy, antisense therapy and vaccine
production, The proteins and polymucleotides are useful for screening for
contropathology, cardiac shork, pancreatitis, cardiac dysfunction,
contropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal
infections, autoimmunity, genetic diseases, hematopoietic disorders,
conteoporosis, severe combined immunodeficiency, eczema, allergic
rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression,
chalbeimer's disease, parkinson's disease, neurodegenerative and
contrological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FIBNLLPSDGDFWIGLRRREEKQSNSTACQDLYAWTDGSISQFRNWYVDEPSCGSEVCVV 120

The human secreted proteins can have activities based on the tissues and cells they are expressed in. Examples of the activities are: cytostatic; municosuppressive; antiHIV; antiinflammatory; nootropic; neuroprotective; antiallergic; osteopathic; antiarthritic; antibacterial; antidiabetic; antiallergic; osteopathic; antiarthritic; antibacterial; antidiabetic; corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions an be diagnosed by determining the amount of the proteins in a sample or by determining the presence of mutations in the proteins in a sample or by determining the presence of mutations in the polynucleotides. Dased on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and foetal deficiencies, blood disorders, diseases of the immune system, allergies, Alzeimer's and behavioural disorders, schizophrenia, cancer, mannlant such the cancer, in an authrities, infections, AlDS, spinal cord disparsions or present and foetal deficiencies, authrities, infections, AlDS, spinal cord disparsions or present and foetal deficiencies, blood disparsions and foetal deficiencies, blood disparsions and foetal deficiencies, blood disparsions and foetal deficiencies, and behavioural disparse, inflammation, and present deficiencies, blood disparsions and foetal deficiencies, and foetal deficienc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Valenghant rejection, diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, reproductive disorders, gastrointestinal disorders, respiratory disorders and metabolic disorders. The proteins or polymucleotides can also be used as food additives or preservatives. The proteins are also useful for identifying their binding partners. AAA26337 to AAA26345 and AAY91450 are sequences used in the

                                                                                                                                                       The CDNA sequences are obtained from CDNA libraries, prepared from fetal lung, fetal lung, fetal factor.

The CDNA sequences are obtained from CDNA libraries, prepared from fetal lung, fetal lung, fetal retina.

The encoded polypeptides have specific uses based on their homology to move and the repair of acute and encoded on their homology to associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions of ulceration and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions of ulceration and and congenital microvillus arrophy), skind diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the valva and gliomas), with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the valva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease, for fibromodulin, e.g. for reducing dermal scarring. PRO266 can be used as a target for anti-tumor drugs. PRO363 can be used as an a target for anti-tumor drugs. PRO363 can be used as an a target for anti-tumor drugs. PRO363 can be used as an christonestic agent; PRO377 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CGSEVCVVMYHQPSAPAGIGGPYMFQWNDDRCNWKNNFICKYSDEKPAVPSREAEGEETE 172

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.
The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal cand a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNP) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be, used to determine the presence of tumours and also breast, prostate, rectal, cervical, or liver tumours, in mammalian cubjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     112

The PRO polypeptides are useful for treating skin diseases (e.g. psoriaais), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g. lung enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease, entermial bleeding angiogenesis, ischaemias such as coronary ischaemia, atherosclerosis), inflammatory disorders (e.g. asthma. Theumatoid arthritis, multiple sclerosis), infertility, AIDS and diabetes and retinal disorders usuch as retinitis pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization probes, and in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                 Sixty one nucleic acids encoding PRO polypeptides which are useful in the treatment of skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma) and neurodegenerative diseases (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             53 DEOKLIEKFIENLLPSDGDFWIGLRRREEKQSNSTACQDLYAWTDGSISQFRNWYVDEPS

New PRO polypeptides and nucleic acid molecules, useful in diagnosing or treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, cancer, AIDS, Alzheimer's disease or Parkinson's disease -

Claim 12; Fig 50; 473pp; English.

The invention describes sixty one nucleic acids encoding PRO polypeptides (secreted and transmembrane). The PRO polypeptides and nucleic acids are useful in diagnosing or treating enterocolitis, gastrointestinal ulceration, skin diseases associated with abnormal keratinocyte differentiation, e.g. psoriasis or epithelial cancers such as squamous cell carcinoma, Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, inflammatory diseases, e.g. rheumatoid arthritis, asthma or multiple sclerosis, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, cancer, diabetic complications, or mutations in general. The polypeptides are also useful for wound repair and associated therapies concerned with re-growth of tissue. The PRO polypeptides and nucleic acid molecules are also useful in gene therapy, and as molecular weight markers for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          84
                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to the isolation of novel human secreted and transmembrane proteins (PRO polypeptides), and the polynucleotide sequences encoding them. The polynucleotide sequences are useful in molecular biology, as hybridiation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. The polynucleotide sequences may also be used in preparing PRO polypeptides by recombinant techniques, and in generating either transgenic animals or knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or their antibodies are useful in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as cancer, Alzheimer's disease or ischaemia, and in various diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO245 or PRO1868, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 RLLS-----GOPVCRGGTORPCYKVIYFHDTSRRLNFEEAKEACRRDGGQLVSIESE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid with at least 80% nucleic acid sequence identity to a nucleotide sequence encoding one of 61 secreted/transmembrane polypeptides, or PRO polypeptides or encoding a CC for secreted/transmembrane polypeptides, or PRO polypeptide are a vector comprising the PRO protein extracellular domain. Also included are a vector comprising the PRO publypeptide, and recovering the host cell for the expression of the PRO polypeptide, and recovering the PRO polypeptide from the cell culture), an isolated PRO polypeptide (having at least 80% sequence identity) comprising and an amino acid sequence selected from the 61 PRO proteins; comparing an amino acid sequence encoded by a nucleic acid molecule deposited with an ATCC number (detailed in the specification); or (c) an extracellular domain of a PRO polypeptide or to a PRO polypeptide lacking its associated signal peptide), a chimaeric molecule comprising a PRO comparing the polypeptide, a chimaeric molecule comprising a PRO containing the polypeptide, inking a bioactive molecule to a cell expressing a PRO245 or PRO1868 in a sample suspected of containing the polypeptide, linking a bioactive molecule to a cell expressing a PRO245 or PRO1868. Nucleic acids which crocde PRO can be used to generate either transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents. The nucleic acids may also be used in the development and screening of correcting probes. The PRO polypeptides are useful as molecular markers or in generating probes. The PRO polypeptides are useful as molecular markers or in containing probes. The PRO polypeptides are useful as molecular markers or in generating probes. The PRO polypeptides are useful as molecular markers or in the face acids may also be used in tissue typing. Anti-PRO antibodies are useful in diagnostic assays for PRO. The PRO polypeptides are natural sources. The

                                                                                                                                            The present sequence represents a human lectin ss3939 polypeptide. The polymuclectide sequence is a source of probes, which may be used to identify nucleic acids encoding ss3939 proteins, to identify human chromosome number 11, to map genes on human chromosome number 11, to identify diseases associated with chromosome 11, as single-stranded sense or antisense oligonucleotides to inhibit expression of polypeptides encoded by the ss3939 gene, and for gene therapy. The ss3939 polypeptides may be useful for developing treatments for amounts of the polypeptides. The antibodies may be useful for developing treatments for detecting the presence of ss3939 polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CVVMYHQPSAPAGIGGPYMFQWNDBRCNMKNNFICKYSDEKPAVPSREAGGEFELTTPV

The present sequence is a human extracellular matrix and cell
adhesion molecule (XMAD) The XMAD is used for screening a compound for
effectiveness as an agonist or antagonist of XMAD. The identified agonist
or antagoinst are used for treating a disease or condition associated
with decreased or increased expression of functional XMAD. The
conformation of the conformation of functional XMAD. The
polynucleotides encoding XMAD are useful in somatic or germiline gene
therapy to correct a genetic deficiency, to express a conditionally
lethal gene product and to express a protein which affords protection
against intracellular parasites and also for diagnosis of disorders
associated with expression of XMAD. They are also used for generating
hybridisation probes useful in mapping the naturally occurring genomic
consideration probes useful in mapping the naturally occurring genomic
sequences and to create knock in humanised animals (mice or rats) to model human diseases. Oligonuclectic or larangenic
continuals (mice or rats) to model human diseases. Oligonuclectic or larangenic
sequences and correate knock in humanised animals (mice or rats) to model human diseases. Oligonuclectic or larangenic
consideration or ratal concel human diseases. Oligonuclectic or larangenic
consideration of the polynuclectic disorders may be used as
disease, myotonic dystrophy, sickle cell anaemia, thalassaemia,
autoimmune/inflammatory disease, alleragies, anaemia, asthma,
contended the contract disease, alleragies, anaemia, asthma,
attended the contract disease, alleragies, anaemia, asthma,
contended the contract or patients and humanic infections and
contential, fungal, parasitic, protozoal and helminthic infections and
cancer including breast, bladder. Den marrow, brain and unerganicallicial protessis and entire warring and entire mice including breast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human extracellular matrix and cell adhesion molecules and polynucleotide sequences encoding them, useful for diagnosis, prevention, treatment of genetic, autoimmune and cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    bone marrow, brain and uterus

The polymucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and brain itssue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis. The sequences are involved in chemotactic or chemokinetic activity, regulation of haematopoiesis, treatment of myeloid or lymphoid

regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, tissue repair, healing of burns, incisions, ulcers, treatment of osteoporosis, osteoarthritis, bone degenerative disorders and periodontal disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis and myasthenia gravis, allergic conditions such as asthma, thrombolysis or thrombosis and coagulation disorders. Sequences ABG66666-ABG66758 represent human novel polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinator, tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hymonitis, diabetes mellitus, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                       Claim 11; SEQ ID NO 2579; 2081pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     374 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The polynuclectide sequences given in AAA26146 to AAA26458 encode the human secreted proteins given in AAA791451 to AAA791691. The human secreted human secreted proteins given in AAY91451 to AAA791691. The human secreted proteins given in the tissues and cells they are cexpressed in. Examples of the activities are: cytostatic; immunosuppressive; antiHIV; antiHiAlammatory; nootropic; neuroprotective; antiallergic; osteopathic; antiarthritic; antibacterial; antidabetic; corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the proteins in a sample or by determining the presence of mutations in the proteins in a sample or by determining the presence of mutations in the colymucleotides. Specific uses are described for each of the polymucleotides, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and foctal deficiencies, blood disorders, discasses of the immune system, allergies, Alzheimer's and behavioural diseases of the immune system, allergies, Alzheimer's and behavioural diseases, inflammation, cortopynasorosis, arthritis, infections, AIDS, spinal cord injuries, transplant rejection, diabetees, asthma, sepsias, acne, psoriasis, cardiovascular disorders, reproductive disorders, gastrointestinal disorders, respiratory disorders and metabolic disorders. The proteins or polynucleotides can also be used as food additives or preservatives. The proteins are also useful for identifying their binding partners.

AAA26337 to AAA26345 and AAY91450 are sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô

                                                                                                                                                                                                                                                                                                                                                                     The cDNA sequences are obtained from cDNA libraries, prepared from fetal lung, fetal lung, fetal from cDNA libraries, prepared from fetal lung, fetal lung, fetal factor.

The chook sequences are obtained from cDNA libraries, prepared from fetal lung, fetal lung, fetal lung. Fetal retina.

The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chromonic mucosal lesions (e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal uncosa and congenital microvillus arrophy, skind diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), concert effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease, ALS, neuropathics or cancer. PRO266 can be used as a target for anti-tumor drugs. PRO369 can be used as an anti-thrombotic agent: PRO287 polypeptides and portions may have therapeutic applications in wound healing and tissue specific. PRO317 can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ESEDEQKLIEKFIENLLPSDGDFWIGLRRREEKQSNSTACQDLYAWTDGSISQFRNWYVD 112

Sequences AAU29024-AAU29128 represent PRO polypeptides of the invention.
The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of and a control sample of normal cells, whereby a higher level of an acontrol sample of normal cells, whereby a higher level of an arbbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of fondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also proteins can be used to determine the presence of tumours and also proteins the prostate, rectal, cervical, or liver tumours, in mammalian chasts, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acide can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EPSCGSEVCVVMYHQPSAPAGIGGPYMFQWNDDRCNMKNNFICKYSDEKPAVPSREAEGE 172

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    transmembrane PRO polypeptides. The Prosent sections and transmembrane PRO polypeptides. The PRO polypeptides are useful for treating skin dieeases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g. lung enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischemias such as coronary ischaemia, atherosclerosis), inflammatory disorders (e.g. asthmatheumatoid arthritis, multiple sclerosis), infertility, AIDS and diabetes and retinal disorders such as retinitis pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization probes, and in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ESEDEQKLIEKFIENLLPSDGDFWIGLRRREEKQSNSTACQDLYAWTDGSISQFRNWYVD

New PRO polypeptides and nucleic acid molecules, useful in diagnosing or treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, cancer, AIDS, Alzheimer's disease or Parkinson's disease -

Claim 12; Fig 50; 473pp; English.

The invention describes sixty one nucleic acids encoding PRO polypeptides (secreted and transmembrane). The PRO polypeptides and nucleic acids are useful in diagnosing or treating enrearcolitis, gastrointestinal ulceration, skin diseases associated with abnormal keratinocyte differentiation, e.g. psoriasis or epithelial cancers such as squamous cell carcinoma, Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, inflammatory diseases, e.g. rheumatoid arthritis, asthma or multiple sclerosis, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, cancer, diabetic complications, or mutations in general. The polypeptides are also useful for wound repair and associated therapies concerned with re-growth of tissue. The PRO polypeptides and nucleic acid molecules are also useful in gene therapy, and as molecular weight markers for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the isolation of novel human secreted and transmembrane proteins (PRO polypeptides), and the polynucleotide sequences encoding them. The polynucleotide sequences are useful in molecular biology, as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. The polynucleotide sequences may also be used in preparing PRO polypeptides by recombinant techniques, and in generating either transgenic animals or knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or their antibodues are useful in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as cancer, Alzheimer's disease or ischaemia, and in various diagnostic assays.

ABU71445-ABU71505 represent human PRO polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO245 or PRO1868, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid with at least 80% nucleic acid sequence identity to a nucleotide sequence encoding one of a secreted/transmembrane polypeptides, or PRO polypeptides or encoding a CT Secreted/transmembrane polypeptides, or PRO polypeptide so a vector comprising the PRO nucleic acid, a host cell comprising the vector, producing a PRO polypeptide (by culturing the host cell for the expression of the PRO polypeptide (by culturing the PRO polypeptide from the cell culture), an isolated PRO polypeptide (having at least 80% sequence identity) comprising a maino acid sequence selected from the 61 PRO proteins; companient and amino acid sequence encoded by a nucleic acid molecule deposited (b) an amino acid sequence encoded by a nucleic acid molecule deposited (with an AFCC number (detailed in the specification); or (c) an extracellular domain of a PRO polypeptide or to a PRO polypeptide lacking its associated signal peptide), a chimmeric molecule comprising a PRO containing the polypeptide, iniking a bioactive molecule to a cell activity of a cell expressing a PRO245 or PRO1868 in a sample suspected of containing the polypeptide, linking a bioactive molecule to a cell expressing a PRO245 or PRO1868 in a sample suspected of containing the polypeptide, linking a bioactive molecule to a cell activity of a cell expressing a PRO245 or PRO1868 in a sample suspect of therapeutically useful reagents are useful as an encode markers, or in generating probes. The PRO polypeptica acids may also be used in the development and screening of therapeutically useful reagents. The nucleic acids may be used for protein electrophoresis, and the isolated nucleic acids may be used for protein electrophoresis, and the isolated nucleic acids may be used in tissue typing Anti-PRO polypeptides are useful and in diagnostic assays for PRO. And in a diffinity purification companient cell culture or matural sources. The propersion of protein sequence represents a PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polypeptides, useful in gene therapy, in chromosome identification, as chromosome markers, in generating probes and in tissue typing
                                                                                                                                                                                                                                                                                                                                                                                                                               Desnoyers L, Eaton DL, Ferrara N; W, Gerber H, Gerritsen ME, Goddard A; Gurney AL, Hillan KJ, Kljavin IJ; NP, ROy MA, Stewart TA, Tumas D;
